## Third Nine Weeks

Common Core Domain	Common Core State Standard
<p>Operations and Algebraic Thinking (1.OA)</p>	<p>1. Use addition and subtraction within 20 to solve word problems involving situations of adding to, taking from, putting together, taking apart, and comparing, with unknowns in all positions, e.g., by using objects, drawings, and equations with a symbol for the unknown number to represent the problem.</p> <p>3. Apply properties of operations as strategies to add and subtract. Example: if <math>8+3=11</math> is known, then <math>3+8=11</math> is known. (Commutative property of addition) To add <math>2+6+4</math>, one can add <math>6+4</math> to make a ten, so <math>2+6+4=2+10=12</math>. (Associative property of addition)</p> <p>4. Understand subtraction as an unknown-addend problem. For example, subtract <math>10-8</math> by finding the number that makes 10 when added to 8.</p> <p>5. Relate counting to addition and subtractions (e.g., by counting on 2 to add 2).</p> <p>6. Add and subtract within 20, demonstrating fluency for addition and subtraction within 10. Use strategies such as counting on; making ten (e.g., <math>8+6=8+2+4=10+4=14</math>); decomposing a number leading to a ten (e.g., <math>13-4=13-3-1=10-1=9</math>); using the relationship between addition and subtraction (e.g., knowing that <math>8+4=12</math>, one knows that <math>12-8=4</math>); and creating equivalent but easier or known sums (e.g., adding <math>6+7</math> by creating the known equivalent <math>6+6+1=13</math>).</p> <p>7. Understand the meaning of the equal sign, and determine if equations involving addition and subtraction are true or false. For example, which of the following equation are true and which are false? <math>6=6</math>, <math>7=8-1</math>, <math>5+2=2+5</math>, <math>4+1=5+2</math>.</p> <p>8. Determine the unknown whole number in an addition or subtraction equation relating three whole numbers. For example, determine the unknown number that makes the equation true in each of the equations <math>8+?=11</math>, <math>5=?-3</math>, <math>6+6=?</math>.</p>
<p>Number and Operations in Base Ten (1.NBT)</p>	<p>1. Count to 120, starting at any number less than 120. In this range, read and write numerals and represent a number of objects within a written numeral.</p> <p>2. Understand that the two digits of a two-digit number represent amounts of tens and ones. Understand</p>

<p>Measurement and Data (1.MD)</p> <p>Geometry (1.G)</p>	<p>the following as special cases:</p> <ol style="list-style-type: none"><li>10 can be thought of as a bundle of ten ones—called a “ten”.</li><li>The numbers from 11 to 19 are composed of a ten and one, two, three, four, five, six, seven, eight, or nine ones.</li><li>The numbers 10, 20, 30, 40, 50, 60, 70, 80, 90, refer to one, two, three, four, five, six, seven, eight, or nine tens (and 0 ones).</li></ol> <p>3. Compare two two-digit numbers based on meanings of the tens and ones digits, recording the results of comparisons with the symbols <math>&lt;</math>, <math>=</math>, and <math>&gt;</math>.</p> <p>4. Add within 100, including addition a two-digit number and a multiple of 10, using concrete models or drawings and strategies based on place value, properties of operations, and/or the relationship between addition and subtraction; relate the strategy to a written method and explain the reasoning used. Understand that in adding two-digit numbers, one adds tens and tens, ones and ones; and sometimes it is necessary to compose a ten.</p> <p>5. Given a two-digit number, mentally find 10 more or 10 less than the number, without having to count; explain the reasoning used.</p> <p>6. Subtract multiples of 10 in the range 10-90 (positive or zero differences), using concrete models or drawings and strategies based on place value, properties of operations, and/or the relationship between addition and subtraction; relate the strategy to a written method and explain the reasoning used.</p> <p>3. Tell and write time in hours and half-hours using analog and digital clocks.</p> <p>4. Organize, represent, and interpret data with up to three categories; ask and answer questions about the total number of data points, how many in each category, and how many more or less are in one category than in another.</p> <p>1. Distinguish between defining attributes (e.g., triangles are closed and three-sided) versus non-defining attributes (e.g., color, orientation, overall size); build and draw shapes to possess defining attributes.</p> <p>2. Compose two-dimensional shapes (rectangles, squares, trapezoids, triangles, half-circles, and quarter-</p>

	<p>circles) or three-dimensional shapes (cubes, right rectangular prisms, right circular cones, and right circular cylinders) to create a composite shape, and compose new shapes from their composite shape. (Students do not need to learn formal names such as “right rectangular prism”).</p> <p>3. Partition circles and rectangles into two and four equal shares, describe the shares using the words halves, fourths, and quarters, and use the phrases half of, fourth of, and quarter of. Describe the whole as two of, or four of the shares. Understand for these examples that decomposing into more equal shares creates smaller shares.</p>
