Geometry

Second Nine Weeks

(i.e., bisect and trisect segments, congruent angles, congruent segments, a line parallel to a given line through a point not on the line, angle bisector, and perpendicular bisector).

#3,4-3

3108.4.27 Use right triangle trigonometry to find the area and perimeter of quadrilaterals (e.g. square, rectangle, rhombus, parallelogram, trapezoid, and kite).

#3-3

3108.4.28 Derive and use the formulas for the area and perimeter of a regular polygon. ($A=1/2 ap$)

#3,4-3

3108.4.29 Extend the effect of a scale factor k in similar objects to include the impact on volume calculations and transformations.

#3,4-3

3108.4.30 Use right triangle trigonometry to find the lateral area (if possible), surface area, and volume of prisms, cylinders, cones, pyramids, spheres, and hemispheres.

#2,3-3

3108.4.31 Use properties of single transformations and compositions of transformations to determine their effect on

Geometry
Second Nine Weeks

	<p>geometric figures (e.g. reflections across lines of symmetry, rotations, translations, glide reflections, and dilations).</p> <p><i>#3-3</i> 3108.4.32 Recognize, identify and apply types of symmetries (point, line, rotational) of two- and three- dimensional figures.</p> <p><i>#3-3</i> 3108.4.33 Use transformations to create and analyze tessellations and investigate the use of tessellations in architecture, mosaics, and artwork.</p> <p><i>#3-3</i> 3108.4.34 Create and analyze geometric designs using rigid motions (compositions of reflections, translations, and rotations).</p> <p><i>#2,3-3</i> 3108.4.36 Use several methods, including AA, SSS, and SAS, to prove that two triangles are similar.</p> <p><i>#2,3-3</i> 3108.4.37 Identify similar figures and use ratios and proportions to solve mathematical and real-world problems (e.g., Golden Ratio).</p>
